DB7

Introducing the brand new DB7

YOUR DENTAL UNITNESS

DB7

Natural evolution of a history of Made in Italy excellence, DB7 is the dental unit that opens the new DB line by OMS. Its fundamental values are those that have distinguished OMS since 1961: absolute quality of materials, with extensive use of resistant and sustainable metals, impeccable mechanics, study of ergonomics, obsessive attention to detail and aesthetics. DB7 is conceived, designed, and produced entirely in Italy. Its design is completely new, starting from the cuspidor, passing through the doctor and assistant console and their supports, arriving at the Moon chair with a new backrest, new stitching, and new floor base. Solid in its fundamentals, DB7 is a top-of-the-range dental unit with a contemporary spirit, in its technological equipment as well as in its attention to the needs of new professionals: the touch display with a modern graphic interface makes every operation easy and intuitive and the LED light indicates the working status of the dental unit, while the regular lines and smooth surfaces of the new design guarantee maximum ease of cleaning. The possibility of equipping the dental unit with the best leading-edge water systems and amalgam separators confirms OMS' attention to the safety of doctors, assistants and patients.
